ROUND0

Another BIG order :
The World's largest
Beam Bending Machine
ROUND0 B-15000-S

We are pleased to announce that we have received an order for yet another Model B-15000-S, the world's largest Beam Bending Machine, destined for the Asian market. The B-15000-S is already in service at customers in Europe as well as in the USA. Since the 1970's, the range of ROUND0 Beam Bending machines has been delivered to customers on every continent in the world.

Our newest customer decided in favor of the ROUND0 Model B-15000-S not only for its superior characteristics and capacity, but also, and most importantly, for the proven reliability and durability that ROUND0 ensures on every machine throughout its entire product range. As always, there were other manufacturers trying to win this deal, but they could not match ROUND0's experience building these massive machines, nor match ROUND0's list of world-wide references, nor prove the capacities of the imaginary machines they quoted.

In the field of Section- and Beam Bending Machines, ROUND0 has been the undisputed leader for more than 40 years. Other suppliers have tried to build these types of machines and failed repeatedly. The technology and know-how at ROUND0 is a result of the experience gained building larger and larger machines over many years, based on a close working relationship with all the leading bending companies around the world.

For additional technical information in this machine, or any other ROUND0 machine, please contact us at:
